

Study Information Technology in HUFS, and work in Korea after graduation.

With specific aims to provide world-class engineering education for international students, all major courses are taught in English.

About Our Program

Global Division offers common courses in the areas of electrical, computer, and industrial engineering. After entering into the division, students can choose one of five engineering departments as their major field.

Common major courses are offered in Global Division in English, and the same courses are taught in some other engineering department in Korean. Therefore, each engineering student has an option to take a common course in English or in Korean. All credits earned from Global Division are counted as major credits in all engineering departments. After taking common courses in Global Division, one can take additional upper-division courses in his/her own department.

The following major fields are offered in the College of Engineering.

- Computer Science & Engineering
- Digital Information Engineering
- Electronics Engineering
- Information and Communications Engineering
- Industrial and Management Engineering

About Our University

Hankuk University of Foreign Studies has always been at the vanguard of globalization of Korea as the country's only institution of higher education specialized in foreign language studies. HUFS ranks first in Korea in terms of internationalization for the

third consecutive year in the Chosun Ilbo-QS Asian University Rankings. HUFS consists of two campuses located in Seoul and Yongin.

Bringing Industry Into Education

Korea is leading the world's IT industry with cutting-edge technologies in the areas of electronics, communications, computers, and automation. In order to provide students with industrial experiences in Korea, Global Division operates internship programs sending students to participating companies. Many senior students in our engineering departments also participate in design projects performed jointly with industry mentors.

Working In Korea

Due to the increasing demand for skilled engineers, Korean companies are getting interested in recruiting foreign IT engineers equipped with bilingual communication skills. By exploiting industry relationship, Global Division will help international students find employment opportunities in Korea.

Graduate Study

All engineering departments in our college offer graduate program for master's and Ph.D degrees. Full scholarship is given to international graduate students.

Since Global Division offers a standardized curriculum accepted in many engineering programs worldwide, graduates of our program may pursue graduate study in domestic or foreign institutions as well.

Extracurricular Opportunities

Our engineering students participate in a variety of activities beyond classroom, gaining experience with teamwork and system design. Each department has students organizations involved in design activities in software, robots, digital system, and so on. International students may join campus-wide organizations involved in sports or cultural activities.

Korean Language Education Program

Although Global Division offers major courses taught in English, students need to take additional courses in general subjects, most of which are given in Korean. Furthermore, if international students are interested in working in Korea after graduation, it is essential to learn Korean language. Thus it is strongly recommended that international students learn basic Korean language skills before entering Global Division.

HUFS offers Korean Language Program of various levels through Center for Korean Language and Culture.

Accommodation for International Students

A new, on-campus dormitory was opened in 2011, equipped with excellent facilities for living. International students will be given priorities for space assignment.

Area Information

Global campus is located in Yongin, near southern part of Seoul, which can be reached within an hour from Gangnam and Jamsil areas by local buses. Bundang and Seongnam areas, located within 30 minute distance, have many interesting places for cultural activities, shopping, and amusements.

Off-campus places for shopping and amusements are vitalized as well.

How to apply

General information on international admission procedure can be found on the website of our university (see below). In order to enter Global Division of IT, one should apply to one of our engineering departments. International students in the College of Engineering will be cared by the Global Division.
